

Name: Venus Chan (4) P.5 (1)Date: 22<sup>nd</sup> November, 2018Remember to write the introduction and the conclusion.

The Earth is facing many problems, all of us should work together to save the Earth.

I think people throw away too much rubbish <sup>on</sup> in the streets. If people produce too much rubbish, the land-fill will be full. We should reuse plastic containers, we should not throw rubbish on the street.

I think <sup>also</sup> there <sup>are</sup> is too many cars on the road. If the cars produce too much black smoke, the air will be more polluted. We should use public transport more often. <sup>Also</sup> we should plant more trees.

I think <sup>also</sup> the sea and the rivers are dirtier than before. If the factories do not stop polluting the sea and the rivers, the sea creatures will be sick or die. The factories should stop polluting the water. <sup>Also</sup>, we should not throw rubbish in the sea.

I think the people waste too much energy. If people leave the lights and TV on when they do not need them, the earth will run out of energy source. We should not leave the lights on when we do not need them. <sup>Also</sup>, we should not leave the door of the fridge open for long time.

If the problems of the Earth get worse, we will die. ~~The Earth~~ need our help! Or else we'll live on Mars.
