

Name: Jacob (1) P.5 (B)Date: 26th November, 2018Remember to write the **introduction** and the **conclusion**.

The Earth is facing many problems. People can help solve the problems. We need to care about the Earth because the Earth is our home.

I think the land is too polluted. If people produce too much rubbish, the land will be very polluted. We should recycle old books and toys. We should put things into recycling bins.

I think the air is very polluted. If cars keep on producing too much black smoke, many people will not have clean air to breathe. We should plant more trees and flowers. Cars should not give out smoke.

I think the water is very dirty. Too many sea animals are dying. If factories give out too much polluted water, many sea animals will be sick or die. We should not throw rubbish into the sea. We should stop polluting the water.

I think people keep on wasting energy. If people waste too much energy, the Earth will run out of energy sources. We should not leave the lights on. We should turn off the air

conditioners when we don't use [✓] them.

We should work together to save the Earth. We should start

working now. If the ~~problems~~ of the Earth get worse, we will not have a

good place to live. Help! Everybody comes to help the Earth!
