Date: 22nd November, 2018

Remember to write the introduction and the conclusion.

The Earth is facing many problems. People can help to solve the problems. Because the Earth becomes very hot. We should recycle old books and old toys.

I think people throw away a lot of rubbish every day. If people throw away a lot of rubbish every day, the street will be dirty. We should put things into recycling bins. I think the cars give out too much smoke. If the cars do not stop giving out too much smoke, the air will be dirty. I think the people keep polluting the water. If the people do not stop polluting the water, we will not have clean water to drink. We should not throw rubbish into the sea. I think people waste energy. If people keep wasting energy, the Earth will run out of energy sources soon. We should turn off the lights when we do not use them.

Everyone should work together to save the Earth. We can start working now. If the problems of the the Earth get worse, the Earth will be dirty.
dirty.
