

Name: Kitty (9) P.5 (B)Date: 26th November, 2018**Remember to write the introduction and the conclusion.**

The Earth is facing many problems. People can help solve the problems. We need to care about the Earth because the Earth is our home.

I think the land is too polluted. If people produce too much rubbish, it will be difficult to find places for the rubbish. We should put things into recycling bins. We should not produce too much rubbish.

I think cars produce too much black smoke. If cars keep on producing too much black smoke, the air will be polluted. We should plant more trees and flowers. We should not cut down too many trees.

I think the sea and the rivers are dirtier than before. If factories give out too much polluted water, sea animals will be sick. We should stop polluting the water. We should not throw rubbish into the sea.

I think people waste too much energy. If people waste too much energy, the Earth will run out of energy sources soon. We should turn off the air conditioner when we don't use it. We should not leave the lights on.

All the people should work together to save the Earth. We

should start working now. If the problems of the Earth get worse,
more sea animals will be sick. Help the Earth! Let's work together!
