The Earth is facing many problems. People can help to solve the problems. We need to care about the Earth, because it is sick. People work together to save the Earth.

I think the land is polluted. If people produce too much rubbish everywhere, it will be difficult to find places for the rubbish. We should reuse bottles. We should recycle paper.

I think cars give out too much black smoke. If cars do not stop giving out too much smoke, the air will be not more polluted. We should stop cars giving out smoke. We should use public transport.

I think the sea and rivers are dirtier than before. If the factories do not stop polluting the water, more sea animals will be sick or die. We should use less water. We should fix dripping taps.

I think people waste too much energy. If people keep wasting energy, the earth will run out of energy sources. We should turn off the lights. We should not leave the taps on when we brush our teeth.

In conclusion, we can recycle clothes, old books, toys and cans. When the earth is clean, we can have a rest. If cars do not stop giving out too much smoke, the air will be more polluted. Earth is sick, can you stop polluting?

Remember 'We', the capital letter for the first word of a sentence
