The Earth is facing many problems. People can help to solve the problems. We need to care about the Earth because the Earth is sick. ~~Every~~ people should work together to save the Earth.

I think the land is too polluted. If people throw too much rubbish every day, it will be difficult to find places for rubbish. We should recycle rubbish. We should use ~~less~~ ^{fewer} plastic bags.

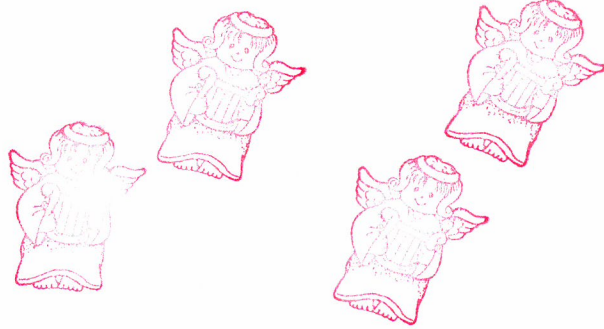

I think cars give too much black smoke. If cars do not stop giving out too much smoke, the air will be more polluted. We should stop cars giving out smoke. We should grow more trees.

I think the sea and the rivers are dirtier than before. If the factories do not stop polluting the sea and the rivers, people will not have clean water to drink. We should not pollute the sea. We should punish those factories which are polluting the sea.

I think people waste too much energy. If people keep

wasting energy, the Earth will run out of energy (sources) soon. We should turn off the lights when do not need them. We should save energy. ✓

In conclusion, we can save water to help our Earth. We can start working now. All the animals will die if the problems of the Earth get worse. Help the Earth together!
