

Name: Shing (17) P.5 (C)Date: 21st November, 2018Remember to write the introduction and the conclusion.

The Earth is facing many problems. People can help to solve the problems. We need to care about the Earth because it is sick. We should work together to help the Earth.

I think the land is too polluted. If people produce too much rubbish everyday, it will be difficult to find places for the rubbish. We should reduce producing rubbish. We should recycle clothes, old books, toys and furniture.

I think cars give out too much black smoke. If cars donot stop giving out smoke, people will be ill easily. We should use public transport. We should plant more trees.

I think the river and the sea are dirtier than before. If people do not stop polluting the water, more sea animals will be sick or die. We should stop polluting the water. We should not throw rubbish into the sea.

I think people use too much energy. If people keep wasting energy, the earth will run out of energy sources soon. We should ~~take~~ ^{save} energy. We should use green energy.

In conclusion, we can save water and energy to help our Earth. We can start working now. All the animals will die, if the problems of the Earth get worse. Earth, earth, we should help!
 good!
